Examiner's Amendment

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

2. Authorization for this examiner's amendment was given in a telephone interview with Edward Brown on 10/5/2006.

3. The application has been amended as follows:

IN THE SPECIFICATION:

Add the following sentence to the specification before line 5 on page 1: --This is a continuation of PCT application No. PCT/EP01/15165 (WO 2002/53634 A1), filed December 20, 2001.--

IN THE CLAIMS

In claim 9, line 1, replace "herein" with --wherein--.

Statement of Reasons for Allowance

4. The present claims are allowable over the closest prior art Wang et al (US 6,469,089), Visel (US 6,121,346), and Hashimoto et al (US 4,714,734) for the following reasons:

The present claims are drawn to a rubber composition, method of making said rubber composition, and a tire and tread made therefrom, wherein the composition comprises a diene

elastomer, a coupling agent, and a reinforcing inorganic filler comprising more than 50 vol % of a silicon carbide having a BET surface area of between 20 and 200 m²/g and an average particle size of 10-350 nm.

Wang et al discloses a rubber composition comprising silicon carbide with a BET surface area of less than 100 m²/g, however, there is no disclosure or suggestion to use silicon carbide with a particle size of 10-350 nm. Wang et al's silicon carbide is not explicitly used as a reinforcing filler. Therefore, it is not obvious to utilize a reinforcing particle size of 10-100 nm as taught by Ciullo et al (from the book, *The Rubber Formulary*).

Visel et al discloses a rubber composition comprising an aggregated reinforcing filler comprising large and small particles, wherein silicon carbide with a diameter of 17-500 nm is used as the large particle. Visel et al does not disclose the BET surface area. While Visel et al discloses that the aggregated filler is a reinforcing filler, it does not teach or suggest that the large particle alone is a reinforcing filler. Hence, it is not obvious to utilize a reinforcing BET surface area like presently claimed as taught by Ciullo et al (from the book, *The Rubber Formulary*).

Hashimoto et al discloses a rubber composition and teaches that silicon carbide can be used as a filler, however, it fails to teach how and in what amount the silicon carbide is to be used or the particle diameter and BET surface area of the silicon carbide.

In light of the above and applicant's argument filed 7/13/2006, it is clear that rejections of record are untenable and thus the present claims are passed to issue.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
